

Sophie Session 3

Thursday, July 9, 2026 11:32 PM

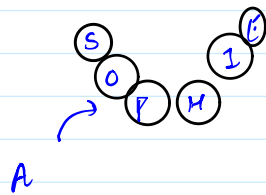

Strings: Sequence of characters inside double quotes.

Ex-

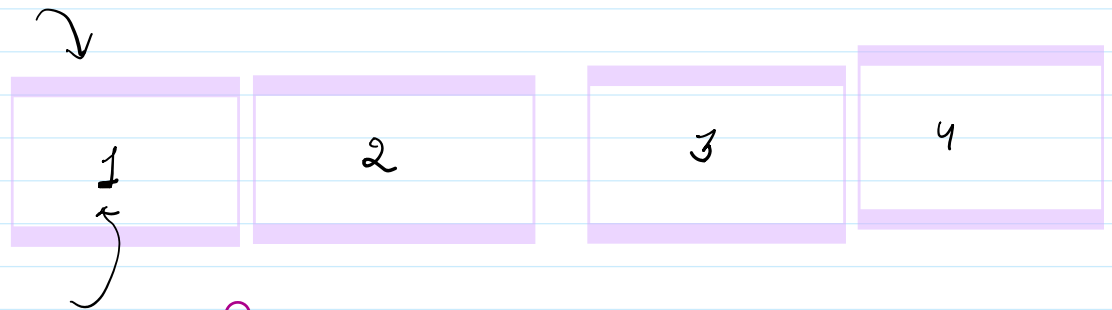

"Azaan"
"Sophie"
"24" ←

Whatever you put inside the double quotes it's a string.

↳ Immutable → which cannot change

Index:

S O P H I E

index → 0 1 2 3 4 5

You access a particular character using an index.

Why the indexing always starts with 0?

index = How much in terms of distance a particular character is differ from first character.

```
name="Sophie" # p--> a  
_change_name="Soahie"
```

String slicing:-

name = "Azaan Suhail"

0 1 2 3 4 5 6 7 8 9 10

first name second name

name [start : end : step]

Inclusive exclusive

starting index

Azaan . Suhail

0 1 2 3 4 5 6 7 8 9 10

String formatting:-

```
_name = "Sophie"
```

```
print("Hello", _name)
```

o/p → Hello Sophie

→ hard coded value

```
name="Sophie"  
print("Hello", name)
```

Hello Sophie

Hello Azaan

Hello X

name = input()

print(f"Hello {name}")

→ Hello Albert ✓

→ Hello Sayma ✓

Escape sequence character	Description	Example	Output
\\	Backslash	>>> print("\\test")	\\test
\'	Single-quote	>>> print("Doesn't")	Doesn't
\"	Double-quote	>>> print("\"Python\"")	"Python"
\n	New line	print("Python", "\n", "Lang..")	Python Lang..
\t	Tab	print("Python", "\t", "Lang..")	Python Lang..
