

Session 2

Friday, July 3, 2026 8:22 PM

Homework :-

1) Calculator basic

$x = 10$
 $y = 2$
`x = int(input())`
`y =`

`print(x+y)` $\rightarrow 10+2=12$

`print(x-y)` $\rightarrow 10-2=8$

`print(x*y)` $\rightarrow 10 \times 2 = 20$

`print(x/y)` $\rightarrow 10/2 = 5.0$

for divide

$x=10$
 $y=3$

$x/y = 3.33$

`//` $\rightarrow$ providing round values.

$x//y = 3$

2) ✓

3) Solar system:-

Formatting:-

name $\rightarrow$ input

`print(Hello _)`

`print(f"Hello {name}")`

`"_"`

Operators

operators $\rightarrow$ operators

$x + y$
 $x - y$
 $x * y$

Types of operator:-

1) Arithmetic operators:-

- $+$ $\rightarrow$ Addition
- $-$ $\rightarrow$ Subtraction
- $//$ $\rightarrow$ floor division
- $\%$ $\rightarrow$ modulus $\times$
- $**$ $\rightarrow$ Exponentiation $\times$
- $*$ $\rightarrow$ Multiplication
- $/$ $\rightarrow$ Division

Modulus($\%$) :-

It provides remainder

Ex- $10 \% 3 = 1$

$10 \% 5 = 0$

Note:- $a \% b$

If $a < b$
 $\downarrow$
 $ans = a$

$2 \% 5 = 2$

$$\begin{array}{r} 3 \overline{) 10} \\ - 9 \\ \hline 1 \end{array}$$
$$\begin{array}{r} 2 \overline{) 10} \\ - 10 \\ \hline 0 \end{array}$$

Exponentiation:- (Power)

$3^{2 \times} = 9$

$4^{3 \times \times} = 64$

Comments:-

1
2
3

ignore by python

This is a comment

2) Assignment operators :-

$+=$

$-=$

$*=$

$./=$

$**=$

$//=$

```

x = 10
# print(x+10)
x += 10
print(x)

```

Output = 20

$$x = x + 10 = 20$$

$x = 10$

$x = 9$

$$x -= 1 \rightarrow x = x - 1 = 9$$

$$x *= 10 \rightarrow x = x * 10$$

3) Relation operators :-

$==$

== Equal To

True / False

$x = 10$

$y = 10$

$x == y$

$x == y \rightarrow \text{True}$

$x == 4 \rightarrow \text{False}$

- == Equal To** ✓
- > Greater Than** ✓
- < Lesser Than** ✓
- >= Greater Than Equal To**
- <= Lesser Than Equal To**
- != Not Equal To**

$a > b \rightarrow 10 > 11 \times \text{false}$

$$x = 10 \quad y = 5$$
$$x \neq y \rightarrow \text{True}$$
 $x=10$ $y=10$

$x \neq y \rightarrow \text{false}$

AND

$$\begin{aligned}x &= 10 \\y &= 5 \\z &= 3\end{aligned}$$

OR

$$\begin{aligned} x &= 10 \\ y &= 5 \\ z &= 3 \end{aligned}$$

$y = 2$
 $z = 3$

$\text{print}(x > y \text{ and } y > z) \rightarrow \text{True}$

$\text{print}(x > y \text{ and } y < z) \rightarrow \text{false}$

$z = 3$

$\text{print}(x > y \text{ or } y > z) \rightarrow \text{True}$

$\text{print}(\overset{\text{True}}{x > y} \text{ or } \overset{\text{false}}{y < z}) \rightarrow \text{True}$
